

SonarQube Installation on RHEL/CENTOS

(Without External Database)

Step 1: Update System Packages

First, update your RHEL system:

```
sudo yum update -y
```

Step 2: Install Java 17 (Required for SonarQube)

SonarQube requires Java 17. Install it:

```
sudo yum install java-17-openjdk -y
```

Verify installation:

```
java -version
```

Step 3: Create a SonarQube User

Create a dedicated user to run SonarQube:

```
sudo useradd -m -d /opt/sonarqube -s /bin/bash sonar  
sudo passwd sonar # Set a password (optional)
```

Grant necessary permissions:

```
sudo chown -R sonar:sonar /opt/sonarqube
```

Step 4: Download & Install SonarQube

```
cd /opt
sudo wget https://binaries.sonarsource.com/Distribution/sonarqube/sonarqube-10.4.1.88267.zip
sudo unzip sonarqube-10.4.1.88267.zip #or latest version
sudo mv sonarqube-10.4.1.88267 sonarqube
```

Set correct permissions:

```
sudo chown -R sonar:sonar /opt/sonarqube
sudo chmod -R 755 /opt/sonarqube
```

Step 5: Configure SonarQube for Remote Access

① Edit the configuration file:

```
sudo vi /opt/sonarqube/conf/sonar.properties
```

② Add these line:

```
sonar.web.host=0.0.0.0
sonar.web.port=9000
```

③ Save and exit (ESC → :wq).

Step 6: Start SonarQube Manually

Switch to the `sonar` user:

```
sudo su - sonar
```

Navigate to the SonarQube binary directory:

```
cd /opt/sonarqube/bin/linux-x86-64
```

Start SonarQube:

```
sh sonar.sh start
```

Check if it's running:

```
ps aux | grep sonar
```

Step 7: Open Firewall Port for SonarQube(for local & VM)

```
sudo firewall-cmd --add-port=9000/tcp --permanent  
sudo firewall-cmd --reload
```

Step 8: Access SonarQube in Browser

❶ Find your server's IP:

```
ip a | grep inet
```

❷ Open a browser and go to:

```
http://<your-server-ip>:9000
```

❸ Login Credentials:

- Username: `admin`
- Password: `admin`

❹ Change Password when prompted.
